

**Privatization and Corporate Disclosure:
The Influence of Ownership Changes, Governance Reforms and
Regulation on Corporate Disclosure Practices in Jordan**

Acknowledgements

I would like to express my gratitude to many people who contributed to the completion of this thesis. My first thanks is to my supervisor Professor Ian Eddie, Dean of the Faculty of Business and Government at the University of Canberra, who showed his support and encouragement when undertaking this research and whose knowledge and understanding provided me with the impetus to improve my research approach.

I also would like to acknowledge the role of Dr Muhammad Jahangir Ali, senior lecturer at the Department of Accounting at La Trobe University, my previous co-supervisor for providing me with his support and assistance throughout the years.

Special thanks to my new co-supervisor Professor Patrick Hutchinson, School of Business at UNE, whose valuable comments contributed to the fulfilment of this thesis. I would like to thank Dr. Omar Marashdeh, a previous senior lecturer in financial economics at the Graduate School of Business, the University of Sydney, and Associate Professor Stephen Owusu-Ansah, the University of Texas-Pan American, for their valuable comments.

Also, I extend my appreciation to the academic and administrative staff of the Business School at UNE, the staff at the Dixon library and the staff at the Research Services Office for their excellent services. My appreciation also goes to the Ministry of Industry and Trade in Jordan, the department of the Company Controller, the Jordanian Association of Certified Public Accountants and the Executive Privatization Commission in Jordan for their valuable assistance and providing me with the information and needed data.

Finally, I would like to thank my family whose love, support and encouragement during the hard times made the completion of this thesis possible. Special thanks to my father and mother whose warm words gave me the needed inspiration, and my wife who showed wonderful understanding, support and help throughout the years.

Abstract

Privatization is an economic policy used by more than a hundred countries worldwide so as to promote the use of markets to allocate resources. Privatization leads to major changes in the ownership structures of firms. Also, governments executing privatization programs have significantly changed their corporate governance systems and disclosure rules (Megginson & Netter 2001). Jordan is one of the developing countries that had recently embarked on a privatization program which resulted in the reduction of the state's ownership from around 15% when the privatization program commenced in 1997 to less than 6% in 2003 largely absorbed by foreign investors. In addition, privatization in Jordan led to major corporate governance and disclosure regulation reforms.

This study empirically examines the impact of privatization on corporate disclosure in Jordan using a novel approach through three channels. First, changes in ownership from the state to private owners who have distinct incentives and abilities to monitor management. Second, changes in corporate governance systems which enhance the quality of corporate disclosure. Jordan reformed its corporate governance system which was incorporated in the 1997 Company Law, the 1997 Temporary Securities Law and the 2002 Securities Law. Third, changes in disclosure regulation so as to improve mandatory disclosure compliance. Jordan, through the enactment of the new Company Law and Securities Law, mandated the adoption of the full version of the IAS/IFRSs and imposed sanctions for non-compliance.

The analysis utilized both cross-sectional regression models and panel data techniques. Panel data was used to account for the dynamic effect of ownership changes resulting from privatization and the resulting governance and disclosure regulation reforms by comparing disclosure in 1996 to that in 2004 (one year before privatization and one year after). The study used the annual reports of the years 1996 and 2004 of 80 public non-financial listed Jordanian companies.

The analysis revealed that while state ownership was a significant determinant of the level of voluntary disclosure, the transfer of ownership to foreign investors produced a significant positive influence on voluntary disclosure. Also, governance reforms through strengthening investor protection had significant influence on voluntary disclosure. Finally, disclosure regulation reforms, and one of the governance mechanisms, the mandate of audit committees, produced a significant influence on mandatory disclosure. Overall, this study showed that privatization had successfully influenced corporate disclosure in Jordan both voluntary and mandatory.

I certify that the substance of this thesis has not already been submitted for any degree and is not currently being submitted for any other degree or qualification.

I certify that any help received in preparing this thesis, and all sources used, have been acknowledged in this thesis.
